

Look Younger. Feel Younger. See Younger.

“ I can now see again without needing glasses or contact lenses. This is one of the most wonderful things that’s ever happened to me. It’s simply amazing. ”

– K. S., KAMRA Vision™ Patient

**They’ve updated their eyewear.
You’ve updated your vision.**

The KAMRA inlay is designed to improve functional near vision, either reducing or eliminating the need for reading glasses. You may need magnification in dim lighting conditions, performing near tasks for a prolonged period, or reading tiny print. Maybe it's time for KAMRA Vision™

Why your near vision is now blurry

Blurry reading vision first becomes noticeable in your 40s. The technical term is presbyopia (prez-bee-OH-pee-ah). It is not dangerous, but it can be aggravating.

The lens in your eye is stretchy and flexible. With time, lens material stiffens. It can't bend into the right shapes to bring close objects into focus. To compensate, you end up moving objects further away at just the right distance to focus. This is why you start holding reading materials at arm's length.

You don't have to live with blurry vision. KAMRA Vision is the proven solution to restore crisp, clear reading vision while maintaining excellent distance vision.

KAMRA Vision restores your near vision

The key to KAMRA Vision technology is the KAMRA™ inlay. Smaller and thinner than a contact lens, the inlay is a film-like ring with an opening in the center. It rests under the surface of your cornea. By concentrating light coming into your eye, near and intermediate vision are restored.

KAMRA Vision makes life feel natural again

With everything once again in sharp focus, it's easy to read the paper over tea. You can check email without struggling. Reading your mobile phone is a snap. With KAMRA Vision, you can look younger, feel younger and see younger.

Don't wait any longer to restore your near vision. Ask your doctor for a KAMRA Vision consultation today!

BEFORE: When the natural focusing ability of the eye diminishes, near vision becomes blurry.

AFTER: With the KAMRA inlay, unfocused light is blocked, making near vision clear.
